

Computer Science

Title: UNIT 1 - PROGRAMMING FUNDAMENTALS

- **Introduction to Algorithms:** A step-by-step procedure to solve a problem. Key properties: Finiteness, Definiteness, and Efficiency.
- **Variables & Data Types:** How computers store data.
 - *Integer:* Whole numbers (e.g., 10, -5).
 - *Float:* Decimal numbers (e.g., 3.14).
 - *String:* Text data (e.g., "Hello World").
- **Control Structures:**
 - *Conditional (If-Else):* Executes code only if a condition is true.
 - *Loops (For/While):* Repeats a block of code multiple times.
- **Functions:** Reusable blocks of code that perform a specific task, helping to reduce redundancy.
